Angles | Non-slip

Angles | Non-slip

Slips and falls are the most common cause of injuries at work. On average, they cause more than a third of all major injuries and more than 40% of all injuries.

The performance of the installed non-slip materials can significantly change this statistic, making the steps safer, both in civil and industrial applications can be applied to any existing step (wood, cement, steel, etc.).

The integration of silica grains provides excellent anti-slip condition even in the most extreme conditions (presence of water, ice, oils, waxes, fats, etc.).

The main features are beveled corners, and the safety color is Yellow.
